- Type Abbreviations ....................................................................................................................... 6
- Dates Changes Effective ................................................................................................................. 7
INTRODUCTION

The Master Numbering System has been developed for the purpose of bringing together all Health Facilities and Programs under one system of identification. The list is a composite of health and health related units, facilities, clinics, programs and services. Each such organization has been assigned a unique four digit identifying code.

This guide of the Master Numbering System is an expansion and update of the 2015 version, inclusive of all changes up to April 1, 2016. This document serves as reference material for the 2016 Master Numbering System Code Book.xls. The code book contains five separate listings:

(A) By Name, in alphabetical sequence;
(B) By Master Number, in numerical sequence;
(C) By Facility Number, in numerical sequence;
(D) By Location; in alphabetical sequence;
(E) By LHIN-CODE; in numerical sequence;

The code book has been designed primarily for use by those involved in completion of the CIHI abstract as well as for physicians and practitioners who require this information to submit claims for payment through the Ontario Health Insurance Plan. Other users should contact the Ministry of Health and Long-Term Care, Health System Information Management and Investment Division, Health Data Branch for further information concerning their use of the system.
SELECTING THE CORRECT IDENTIFYING NUMBER

Four pieces of information are provided to assist in coding/finding the correct Master Number and Facility Number:

1) Location (city, town, village or place name)
2) Name of facility or program
3) Type (List of abbreviations on page II)
4) Public Hospital Amalgamation

Determine the location of the facility or program. Since several facilities in different locations may bear the same name, verify the location before proceeding:

Example: Blind River St. Joseph’s Health Centre AT 2057
          Toronto St. Joseph’s Health Centre AP 1443

Location of facilities and programs within Metropolitan Toronto are listed under the location Toronto.

Facilities and programs are identified by a type code which indicates a broad service classification. Care must be taken to identify the correct service classification by type since various types of service may be provided within one facility:

Example: Barrie Royal Victoria Regional Health Centre AP 1825
          Royal Victoria Regional Health Centre MH 4513
Please note that due to space limitations on field lengths, some facility names have been truncated or abbreviated and do not necessarily constitute legal names.

In addition to the listed hospital sites, hospitals may, from time to time, run programs and services from various other locations to accommodate program growth, provide services closer to clients etc. Please call the hospital directly for specific details.

**ASSISTANCE OR AMENDMENTS**

If you require assistance in locating a facility, or would like to suggest amendments to the list in the form of corrections or additions, please send e-mail to healthinfo@ontario.ca
