Appendix A: Disease-Specific Chapters

Chapter: Gastroenteritis Outbreaks in Institutions and Public Hospitals

Effective: May 2018
Disease

- Communicable

- Virulent

Health Protection and Promotion Act:
O. Reg. 135/18 (Designation of Diseases)

1.0 Aetiologic Agent

Gastrointestinal illness is caused by a variety of pathogens that affect the gastrointestinal tract and is typically acquired through consuming contaminated food, or water, or contact with infected animals, environments, or people.

Gastrointestinal illness outbreaks in health care facilities are most frequently caused by viruses such as noroviruses, and rotaviruses; however, bacteria and other pathogens may cause outbreaks as well.

Note that Clostridium difficile Infection (CDI) outbreaks in public hospitals are a separate disease of public health significance with supporting Appendices under the Infectious Diseases Protocol, 2018 (or as current). CDI outbreaks in other institutions are covered by Recommendations for the Control of Gastroenteritis Outbreaks in Long-Term Care Homes, 2018 (or as current). 1

2.0 Case Definition

2.1 Surveillance Case Definition

See Appendix B

2.2 Outbreak Case Definition

The outbreak case definition varies to reflect the disease and circumstances of the outbreak under investigation. Consideration should be given to the following in establishing an outbreak case definition:

- Clinical, laboratory and/or epidemiological criteria;
- The time frame for occurrence;
- The geographic location(s) or place(s) where cases live or became ill/exposed; and
- Special attributes of cases (e.g., age, underlying conditions) and/or aetiologic agent.

Outbreaks should also be classified by levels of probability (e.g., confirmed, probable, or suspect).
3.0 Identification

3.1 Clinical Presentation
The clinical presentation is dependent on aetiology; however, the most common presentation of gastroenteritis is, but is not limited to, abdominal pain, vomiting, diarrhea\(^*\) that is unusual or different for the patient/resident without other recognized aetiology, along with nausea, headache, chills, fever and/or myalgia.\(^2\)

\(^*\)Diarrhea is defined as loose/watery stool that conforms to the shape of its container.

3.2 Diagnosis

See Appendix B

Laboratory diagnosis depends on the aetiologic agent.

Clinical specimens should be collected from symptomatic cases early in the course of clinical illness to increase the likelihood of detecting a causative agent.\(^1\)

For institutions and public hospitals who implement a food retention policy, 200 grams of potentially hazardous food samples from each meal, frozen at or below -18°C, for 10 days can be submitted to the laboratory for testing if a bacterial pathogen is suspected. If the causative agent of the outbreak is suspected or confirmed to be caused by norovirus, laboratory testing of food retention samples is not recommended.\(^1\)

For further information about human diagnostic testing, contact the Public Health Ontario Laboratories or refer to the Public Health Ontario Laboratory Services webpage:

[http://www.publichealthontario.ca/en/ServicesAndTools/LaboratoryServices/Pages/default.aspx](http://www.publichealthontario.ca/en/ServicesAndTools/LaboratoryServices/Pages/default.aspx)

For more information regarding specimen collection and testing, please refer to the Public Health Inspector’s Guide to the Principles and Practices of Environmental Microbiology:

[https://www.publichealthontario.ca/en/ServicesAndTools/LaboratoryServices/Pages/PHIGuide.aspx](https://www.publichealthontario.ca/en/ServicesAndTools/LaboratoryServices/Pages/PHIGuide.aspx)

4.0 Epidemiology

4.1 Occurrence

In Ontario, gastroenteritis outbreaks in health care facilities occur most frequently between November and May, but may occur at any time during the year.

4.2 Reservoir

Varies, depending on the agent; frequently humans.
4.3 Modes of Transmission
Primarily transmitted through fecal-oral route. May also be transmitted from person-to-person, foodborne, waterborne, and droplet contact of vomitus (for norovirus). Transmission may also occur through contact with contaminated fomites.

4.4 Incubation Period
Varies, depending on the agent.

4.5 Period of Communicability
Varies, depending on the agent.

4.6 Host Susceptibility and Resistance
All persons are susceptible.3

5.0 Reporting Requirements
As per Requirement #3 of the “Reporting of Infectious Diseases” section of the Infectious Disease Protocol, 2018 (or as current), the minimum data elements to be reported for each outbreak are specified in the following sources:

• Ontario Regulation 569 (Reports) under the Health Protection and Promotion Act (HPPA);4
• The iPHIS User Guides published by PHO; and
• Bulletins and directives issued by PHO.

6.0 Prevention and Control Measures

6.1 Personal Prevention Measures and Infection Prevention and Control Strategies
For personal prevention measures and IPAC strategies, please refer to:

• Institutional/Facility Outbreak Management Protocol, 2018 (or as current);5
• Recommendations for the Control of Gastroenteritis Outbreaks in Long-Term Care Homes;1
• Public Health Ontario’s website at www.publichealthontario.ca to search for the most up-to-date information on infection, prevention and control.

6.2 Management of Cases
In addition to the responsibilities set out in the requirements in the Infectious Disease Protocol, 2018, (or as current), the Board should refer to the Recommendations for the Control of Gastroenteritis Outbreaks in Long-Term Care Homes.1
If the outbreak is caused by a specific disease of public health significance, (e.g., salmonellosis) refer also to the disease-specific chapter.

6.3 Management of Contacts

Conduct surveillance of residents/patients and staff for development of symptoms. Implement control measures for visitors in the institution or public hospital during an outbreak. For more information on management of contacts, please refer to Recommendations for the Control of Gastroenteritis Outbreaks in Long-Term Care Homes.¹

6.4 Management of Outbreaks

Please see the Infectious Disease Protocol, 2018, (or as current) for steps in managing outbreaks.
