Appendix A: Disease-Specific Chapters

Chapter: Respiratory Infection Outbreaks in Institutions and Public Hospitals

Effective: February 2019
Respiratory Infection Outbreaks in Institutions and Public Hospitals

☐ Communicable
☐ Virulent

Health Protection and Promotion Act:
O. Reg. 135/18 (Designation of Diseases)

1.0 Aetiologic Agent

Respiratory infection outbreaks in institutions and public hospitals are caused by a variety of respiratory viruses such as influenza A and B, respiratory syncytial virus (RSV), parainfluenza, rhinovirus, human metapneumovirus, coronaviruses and adenovirus. Bacteria that occasionally cause respiratory outbreaks in institutions are *Chlamydophila pneumoniae*, *Legionella spp.* and *Mycoplasma pneumoniae* (Atypical Pneumonia).

2.0 Case Definition

2.1 Surveillance Case Definition

Refer to Appendix B for Case Definitions.

2.2 Outbreak Case Definition

The outbreak case definition varies with the outbreak under investigation. Please refer to the *Infectious Diseases Protocol, 2018* (or as current) for guidance in developing an outbreak case definition as needed.

The outbreak case definitions are established to reflect the disease and circumstances of the outbreak under investigation. The outbreak case definitions should be developed for each individual outbreak based on its characteristics, reviewed during the course of the outbreak, and modified if necessary, to ensure that the majority of cases are captured by the definition. The case definitions should be created in consideration of the outbreak definitions.

Outbreak cases may be classified by levels of probability (*i.e.* confirmed and/or probable).

For further information on outbreak case definitions for respiratory infection outbreaks in institutions, please refer to: Control of Respiratory Infection Outbreaks in Long-Term Care Homes, 2018 (or as current).
3.0 Identification

For the following sections refer to: Control of Respiratory Infection Outbreaks in Long-Term Care Homes, 2018 (or as current).¹

3.1 Clinical Presentation

These viruses often cause similar acute respiratory symptoms. Clinical evidence could include, but is not limited to, the following:

- Upper respiratory tract illness (includes common cold, pharyngitis);
- Runny nose or sneezing;
- Stuffy nose (i.e., congestion);
- Sore throat, hoarseness or difficulty swallowing;
- Dry cough;
- Swollen or tender glands in the neck (cervical lymphadenopathy);
- Fever/abnormal temperature for the resident/patient may be present, but is not required;
- Tiredness (malaise);
- Muscle aches (myalgia);
- Loss of appetite;
- Headache; and
- Chills.

3.2 Diagnosis

See Appendix B for diagnostic criteria relevant to the Case Definitions.

For further information about human diagnostic testing, contact the Public Health Ontario Laboratories or refer to the Public Health Ontario Laboratory Services webpage: http://www.publichealthontario.ca/en/ServicesAndTools/LaboratoryServices/Pages/default.aspx.

4.0 Epidemiology

4.1 Occurrence

Worldwide. Seasonal peaks during fall, winter and early spring.

Respiratory infection outbreaks in institutions and public hospitals in Ontario show a seasonal distribution similar to that seen worldwide. While there is variation from year to year, the season generally begins in September and ends in April.

Outbreaks due to certain organisms are more common during different points in the season.

Please refer to Public Health Ontario’s (PHO) Ontario Respiratory Pathogen Bulletin and Laboratory Based Respiratory Pathogen Surveillance Report and other infectious diseases reports for more information on disease trends in Ontario, available at:
For additional national and international epidemiological information, please refer to the Public Health Agency of Canada and the World Health Organization.

4.2 Reservoir
Humans.

4.3 Modes of Transmission
Person to person; droplet transmission as well as contact with fomites may also occur depending on causative agent.

4.4 Incubation Period
Varies, depending on the causative agent.

4.5 Period of Communicability
Varies, depending on the causative agent.

4.6 Host Susceptibility and Resistance
All persons are susceptible; however susceptibility is greater in the very young and the institutionalized elderly.

5.0 Reporting Requirements
As per Requirement #3 of the “Reporting of Infectious Diseases” section of the *Infectious Diseases Protocol, 2018* (or as current), the minimum data elements to be reported for each case are specified in the following:

- *Ontario Regulation 569 (Reports)* under the *Health Protection and Promotion Act (HPPA)*;
- The iPHIS User Guides published by PHO; and
- Bulletins and directives issued by PHO.

6.0 Prevention and Control Measures

6.1 Personal Prevention Measures
For this section refer also to the *Institutional/Facility Outbreak Management Protocol, 2018* (or as current) and to Control of Respiratory Infection Outbreaks in Long-Term Care Homes, 2018 (or as current).1,3
6.2 Infection Prevention and Control Strategies

Please refer to PHO’s website at www.publichealthontario.ca to search for the most up-to-date infection prevention and control information.

6.3 Management of Cases

In addition to the requirements set out in the Requirement #2 of the “Management of Infectious Diseases – Sporadic Cases” and “Investigation and Management of Infectious Diseases Outbreaks” sections of the Infectious Diseases Protocol, 2018 (or as current), the board of health shall investigate cases to determine the source of infection. Refer to Section 5: Reporting Requirements above for relevant data to be collected during case investigation.

The board of health should also refer to recommendations included in the Control of Respiratory Infection Outbreaks in Long-Term Care Homes, 2018 (or as current).1 If the outbreak is caused by a specific disease of public health significance, refer also to the disease-specific chapter for that disease.

6.4 Management of Contacts

Contacts are managed as part of the outbreak as per the Infectious Disease Protocol, 2018 (or as current) and recommendations included in Control of Respiratory Infection Outbreaks in Long-Term Care Homes, 2018 (or as current).1

6.5 Management of Outbreaks

Please see the Infectious Diseases Protocol, 2018 (or as current) for the public health management of outbreaks or clusters in order to identify the source of illness, manage the outbreak and limit secondary spread.

Further recommendations for outbreak management is outlined in Control of Respiratory Infection Outbreaks in Long-Term Care Homes 2018 (or as current) as well as the Institutional/Facility Outbreak Management Protocol, 2018 (or as current).1,3
