

Ontario Influenza Bulletin 2006-2007 Season

SURVEILLANCE WEEK 46 (November 12 - 18), 2006

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from November 12 - 18, 2006 (week 46). The analysis for this issue occurred on Wednesday November 22, 2006, therefore all data is current to that date.

During week 46, 2006, influenza activity in Ontario was slightly higher compared to that of the previous week. Four sporadically occurring case of influenza (three influenza A and one B) were reported through iPHIS from various health units, while none reported any institutional influenza outbreak. Central West health region continued to report 'localized' influenza activity; Central East region reported 'sporadic' activity and all other regions reported 'no activity' levels.

For a definition of influenza-like illness (ILI) activity levels and links to websites providing current influenza information from other sources, please refer to the attached Appendix- I. If you would like to provide feedback on the Bulletin, please contact Shafiq Chowdhury (shafiq.chowdhury@moh.gov.on.ca, 416-327-7807) or Anne-Luise Winter (anne-luise.winter@moh.gov.on.ca, 416-327-7301).

Table 1: Summary of laboratory-confirmed influenza cases and institutional influenza outbreaks by health region, November 12 - 18 (week 46), 2006.

Lab-confirmed Influenza cases*	HEALTH REGION							TOTAL
	North West	North East	Eastern	Central East	Toronto	South West	Central West	
Influenza A	0	0	0	1	0	0	2	3
Influenza B	0	0	0	0	0	1	0	1
Influenza A & B	0	0	0	0	0	0	0	0
Total new cases	0	0	0	1	0	1	2	4
Institutional influenza outbreaks‡	0	0	0	0	0	0	0	0

SOURCE: MOHLTC [iPHIS, Health Unit Reports to PHD]

* Includes reports of sporadically occurring influenza through iPHIS, as well as cases in institutional outbreaks, with dates of onset in the surveillance period.

‡ Laboratory-confirmed outbreaks in institutions during the surveillance period.

SOURCE: MOHLTC [iPHIS, Health Unit Reports to abstracted by CRN at PHD]

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.

† Episode Date for a case corresponds to the earliest date on record for the case according to the iPHIS hierarchy (Symptom Date > Clinical Diagnosis Date > Specimen Collection Date > Lab Test Date > Reported Date)

Influenza Subtype(s):

During week 46, 1519 isolates were received by the Public Health Agency of Canada, with a total of 11 testing positive for influenza A and one for influenza B. The majority of influenza A isolates (9) were from Alberta (81.8%), while there was one each from Ontario (9.1%) and Quebec (9.1). The only influenza B isolate was from Ontario (100.0%)*

Antigenic Characterization:

The National Microbiology Laboratory (NML) has characterized seven influenza viruses for the 2006-2007 influenza season: one A/Wisconsin/67/2005(H3N2)-like virus (from Ontario) and six A/New Caledonia/20/99(H1N1)-like viruses (from Alberta). Both strains are included in the composition of the 2006-2007 Canadian influenza vaccine. **

Antiviral Resistance:

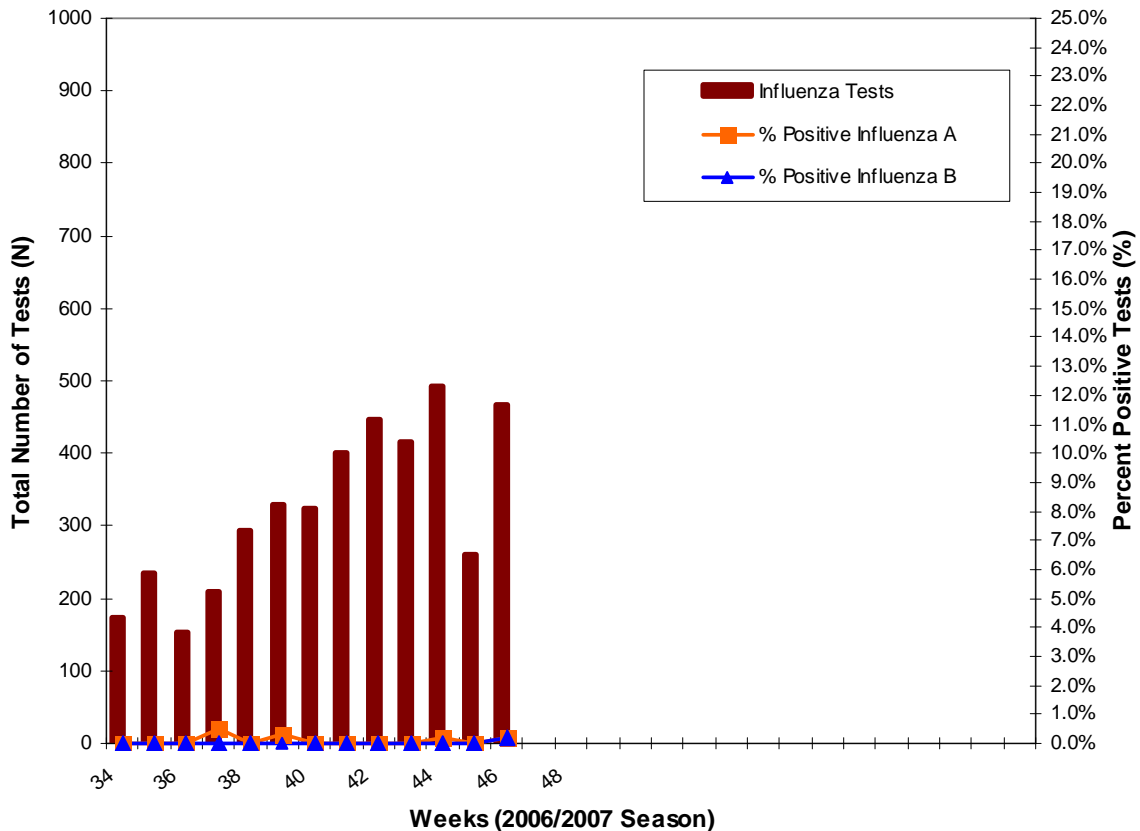

The NML has tested five influenza A isolates for amantadine resistance this season and found that the one influenza A(H3N2) isolate tested was resistant to amantadine. The other four isolates were influenza A/H1N1 which remain sensitive to amantadine. **

Note: Based on the World Health Organization recommendations, Canada's National Advisory Committee on Immunization (NACI) recommended the **2006-2007** influenza vaccine contain an **A/New Caledonia-like**, an **A/Wisconsin-like** & a **B/Malaysia-like** virus strain.

* These data have been obtained from the Respiratory Virus Detection tables of Public Health Agency of Canada for week 46, 2006.

** These data have been obtained from the FluWatch report of the Public Health Agency of Canada for week 45, 2006.

Figure 1: Total number of influenza tests performed and percent of positive tests in Ontario reported to the Centre for Infectious Disease Prevention and Control (CIDPC), by report week .

Source: Public Health Agency of Canada

* Total numbers reported include late reports; therefore totals may not be equal to the sum of the weekly numbers.

Note: Cumulative numbers for season to date are available through FluWatch: <http://www.phac-aspc.gc.ca/fluwatch/>

SOURCE: MOHLTC: iPHIS Outbreak Summary

* New outbreaks are those in which the date of onset of illness in the first case occurred and recorded through iPHIS in the current surveillance period; i.e. November 12 -18, 2006

** Season to date includes all outbreaks in which the date of onset of illness in the first case occurred from September 1 – November 18, 2006

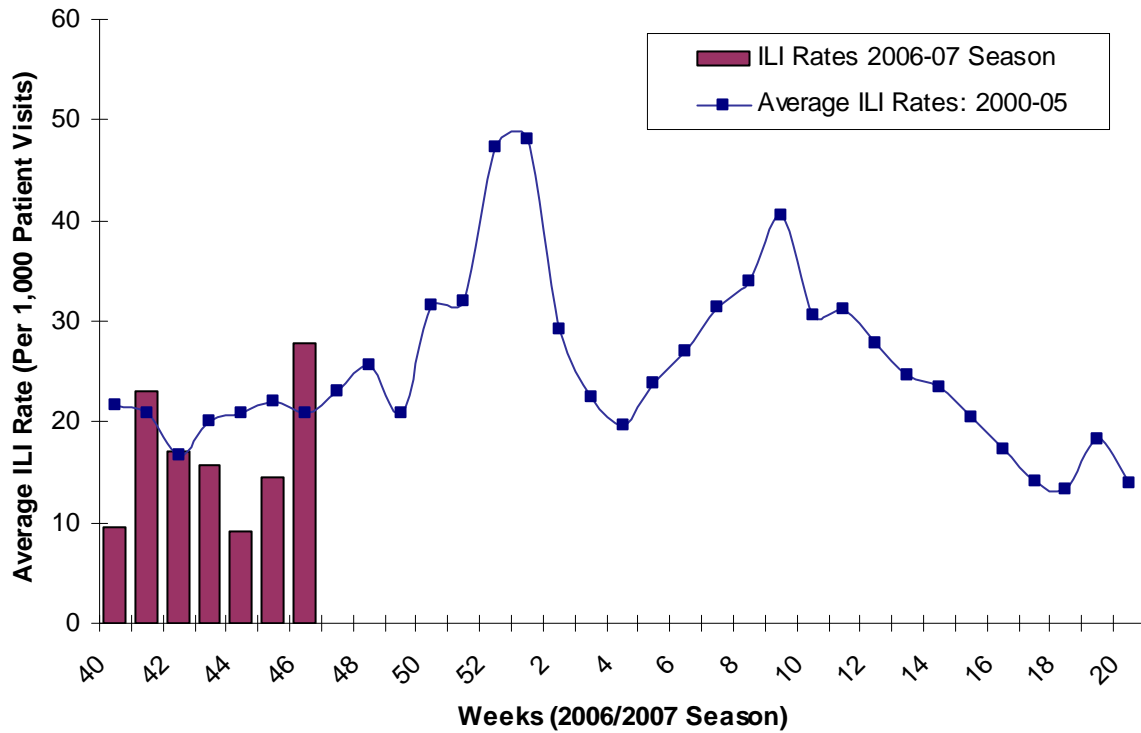

Figure 2: Influenza Activity* levels in Ontario by health unit & health region for week 46 (November 12 - 18), 2006.

SOURCE: MOHLTC [Provincial Influenza Activity Report (Appendix C) Database]

* Influenza activity levels are assigned by local public health units and reported to the MOHLTC by the Tuesday following the end of the surveillance week at 4 pm. Activity levels are assigned based on laboratory confirmations, ILI reports from various sources, and laboratory-confirmed institutional outbreaks. Please refer to detailed definitions for the 2006-2007 season included in the Appendix-1]

Figure 3: Average influenza-like illness (ILI) consultation rate (per 1,000 patient visits) reported by sentinel physicians* in Ontario in 2006- 2007 season, by report week, Compared to Ontario average† (1999/2000 to 2004/05 seasons).

Source: Public Health Agency of Canada

* Sentinel physician information is reported to Public Health Agency of Canada.

† No data available for mean rate in previous years for weeks 21 to 39 (1999-2000 through 2004-2005 seasons). During weeks 20-39, 2002-2003/2004-2005 seasons, ILI is reported once every two weeks, on even weeks only.

APPENDIX - I

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.

No Activity: **No laboratory confirmed* influenza cases(s) or outbreak detected during the past four weeks** within the influenza surveillance region, however, sporadically occurring ILI may be reported†

Sporadic: Sporadically occurring **ILI and laboratory confirmed influenza* case(s) with NO outbreaks** detected within the influenza surveillance region†

Localized: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in less than 50% of the influenza surveillance region(s)†**

Widespread: sporadically occurring **ILI and laboratory confirmed influenza* case(s) together with outbreaks of ILI** in schools and/or worksites or laboratory confirmed influenza in residential institutions occurring **in greater than or equal to 50% of the influenza surveillance region(s)†**

* Confirmation of influenza within the surveillance region at any time within the prior week

† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day, most likely due to ILI.

Residential institutions: two or more cases of ILI within a seven-day period, **including at least one laboratory-confirmed case.**
