## New Single Source Drug(s)

<u>DIN</u>	<u>PRODUCT</u>	<u>GENERIC NAME</u>	<u>MFR</u>	<u>DBP</u>
02312441	Pradax 110mg Cap	DABIGATRAN ETEXILATE	BOE	1.6000
02358808	Pradax 150mg Cap	DABIGATRAN ETEXILATE	BOE	1.6000

### Reason for Use Code

### Clinical Criteria

- 431 For the prevention of stroke and systemic embolism in at risk patients with non-valvular atrial fibrillation (AF), **AND** in whom:
- 1) Anticoagulation is inadequate following a reasonable trial on warfarin; **OR**
  - 2) Anticoagulation with warfarin is contraindicated or not possible due to inability to regularly monitor via International Normalized Ratio (INR) testing (i.e., no access to INR testing services at a laboratory, clinic, pharmacy, and at home).

### **Exclusion Criteria:**

Impaired renal function (creatinine clearance or estimated glomerular filtration rate less than 30mL/min); **OR** greater than or equal to 75 years of age **without** documented stable renal function; **OR** hemodynamically significant rheumatic valvular heart disease, especially mitral stenosis; **OR** prosthetic heart valves.

### **Note:**

- (a) Documented stable renal function is defined as creatinine clearance or estimated glomerular filtration rate maintained for at least 3 months (i.e., 30-49mL/min for 110mg twice daily dosing and, greater than or equal to 50mL/min for 150mg twice daily dosing for at least 3 months).
- (b) At risk patients with atrial fibrillation are defined as those with a CHADS2 score of greater than or equal to 1.
- (c) Inadequate anticoagulation is defined as INR testing results that are outside of the desired INR range for at least 35% of the tests during the monitoring period (i.e., adequate anticoagulation is defined as INR test results that are within the desired INR range for at least 65% of the tests during the monitoring period).

DIN      PRODUCT      GENERIC NAME      MFR      DBP

Continued from the previous page

**Reason for Use Code**      **Clinical Criteria**

**Note:**

- (d) A reasonable trial on warfarin is defined as at least 2 months of therapy.
- (e) Since renal impairment can increase bleeding risk, renal function should be regularly monitored. Other factors that increase bleeding risk should also be assessed and monitored (see product monograph).
- (f) Patients starting dabigatran should have ready access to appropriate medical services to manage a major bleeding event.
- (g) There are currently no data to support that dabigatran provides adequate anticoagulation in patients with rheumatic valvular disease or those with prosthetic heart valves; dabigatran is not recommended in these populations.

LU Authorization Period: Indefinite

02357658	Vimpat 200mg Tab	LACOSAMIDE	UCB	5.3200

**Reason for Use Code**      **Clinical Criteria**

430      As adjunctive therapy in the treatment of adult patients with partial onset seizures who have had an inadequate response or have significant intolerance to at least 3 less costly anticonvulsant therapies;  
AND  
Patients are under the care of a physician experienced in the treatment of epilepsy.

Note: Less costly anticonvulsant therapies may include the following: Phenytoin, Carbamazepine, Gabapentin, Lamotrigine, Vigabatrin, Topiramate, etc.

LU Authorization Period: Indefinite.

## Therapeutic Note Change(s)

<u>DIN</u>	<u>BRAND</u>	<u>STRENGTH</u>	<u>DOSAGE FORM</u>	<u>MFR</u>
02253275	Gleevec	100mg	Tab	NOV
02253283	Gleevec	400mg	Tab	NOV

These products must be prescribed based on the following criteria:

- 1) For the treatment of Philadelphia chromosome-positive Chronic Myelogenous Leukemia (CML) in chronic phase.

The initial dose is 400mg/day. The dose may be increased up to a maximum of 800 mg/day in patients who do not have an adequate hematologic response at 3 months or cytogenetic response at 1 year; or if there has been loss of a previously achieved hematologic and/or cytogenetic response.

**Note: The Ministry will only reimburse, in a patient's lifetime, any two (2) of the oral Tyrosine Kinase Inhibitors (TKIs)\* used for chronic phase CML.  
(\* TKIs: Imatinib, Nilotinib, or Dasatinib)**

- 2) For the treatment of Philadelphia chromosome-positive Chronic Myelogenous Leukemia (CML) in blast phase or accelerated phase.

The initial dose is 600mg/day. The dose may be increased to a maximum of 800 mg/day in patients who do not have an adequate hematologic response at 3 months or cytogenetic response at 1 year; or loss of a previously achieved hematologic and/or cytogenetic response.
