*All formulations are preservative-free.

For the LU criteria text of LU codes 600 to 607, 609 and 611, please see the LU criteria of the currently listed adalimumab drugs with these LU codes on the e-Formulary.

Code 633

Polyarticular Juvenile Idiopathic Arthritis

For the treatment of polyarticular juvenile idiopathic arthritis (pJIA) in patients who have active disease (greater than or equal to 3 swollen joints and greater than or equal to 5 active joints) despite a trial of optimal doses of subcutaneously administered methotrexate (i.e. 15mg/m² per week) for at least 3 months. If the patient is unable to tolerate or has a contraindication to subcutaneous methotrexate, the nature of the intolerance or contraindication should be documented.

Maintenance/Renewal:

After 12 months of treatment, maintenance therapy is funded for patients with objective evidence of at least a 20 percent reduction in swollen joint count and a minimum of improvement in 2 swollen joints over the previous year. For funding beyond the second year, the patient must demonstrate objective evidence of preservation of treatment effect.

Therapy must be prescribed by a rheumatologist or a prescriber with expertise in rheumatology.

The recommended dosing regimen is for pediatric patients 2 years of age and older:

- 30kg and greater: 40mg every other week

Prescribers should be informed and stay current with a drug's official Health Canada approved product monograph including available dosage formats.

LU Authorization Period: 1 year

Code 634

For the treatment of severe uveitis in patients meeting the following criteria:

A. Has experienced failure or intolerance to an oral corticosteroid (or topical corticosteroid for anterior uveitis) or where the use of corticosteroids is contraindicated, and has experienced failure or intolerance to at least one immunosuppressive therapy;
AND

B. Treatment must be prescribed by an ophthalmologist specialized in uveitis or retinal disease, a uveitis specialist, or a retina specialist familiar with ocular inflammatory diseases.

Requests not meeting the above criteria may be considered on a case-by-case basis through the Exceptional Access Program.

The recommended adult dose is an initial 80mg administered subcutaneously at week 0, followed by 40mg subcutaneously given every other week starting at week 1, as approved by Health Canada.

Note: Higher doses up to 40mg weekly may be considered in patients who have failed to respond to lower doses.

The recommended dose for pediatric patients (2 years or older) with anterior uveitis is: 30kg or greater: 40mg every other week in combination with methotrexate

For patients 6 years of age or older and weighing 30kg or greater, an optional loading dose of 80mg at week 0 may be administered before starting maintenance therapy.

Prescribers should be informed and stay current with a drug's official Health Canada approved product monograph including available dosage formats.

Maintenance/Renewals:

Maintenance therapy is funded for patients who meet the Ministry initiation criteria and who have experienced improvement and/or stability of vision and other treatment goals (e.g. reduction or control of ocular inflammation).

LU Authorization Period: 1 year

New Multi-Source Products

Where applicable, please consult the respective brand reference product's drug profile on the ODB e-Formulary for the details of the Limited Use (LU) code and criteria, and/or any associated Therapeutic Notes (TN).
